NSK EQUIPMENT AND HANDPIECE MAINTAINING PROGRAM...

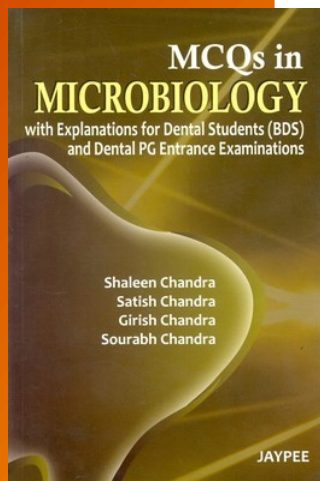

Mrs. Shraddha Shetty held a training program on NSK equipment and hand pieces maintenance on 28th July. This program was quite helpful for the students as well as the staff as everybody learnt how to maintain the equipments with better care. Students learnt the minor technical handling issues along with how to repair certain equipments without too much of hassle.

The program was followed by hands on and even a interactive question answer round by the students. The program was then followed by refreshments for Mrs. Shetty and the teaching Staff.

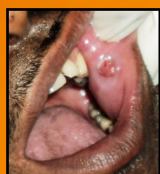

BOOK RELEASE:

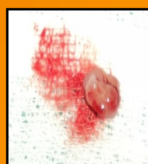

Salient Features These excellent and comprehensive books cover all the aspects of the subject with unique and to the point explanations. It guides them in their preparations for objective type competitive examinations. The questions have been compiled after analysing many question papers of previous years. Presents the text in simple and easy language in order to help undergraduate and postgraduate students preparing for various dental entrance examinations and interviews. Answers with the explanations and references have been given. References are from standard books and medical dictionaries. Books are updated with recently asked questions in all the competitions, examinations and PGMEET Dental examinations.

Case of the issue::

EXTRA GINGIVAL PYOGENIC GRANULOMA - A RARE CASE REPORT

Pre- Treatment

Excised Tissue

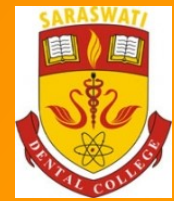

Post -Treatment

Pyogenic granuloma is relatively a common benign inflammatory hyperplasia that presents as a mucocutaneous lesion. Clinically, pyogenic granuloma presents as a smooth or lobulated exophytic lesion manifesting as small, red erythematous papules on a pedunculated or sometimes sessile base, which is usually hemorrhagic. We present a rare case of extra gingival pyogenic granuloma in a 40-year-old male patient who reported to our department with the chief complaint of growth on left buccal mucosa since one year. On intraoral examination, a well defined, smooth, lobulated, exophytic and pedunculated lesion was seen on the left buccal mucosa which was asymptomatic. Based on the history and clinical examination, a provisional diagnosis of traumatic fibroma was made. An excisional biopsy was performed which histopathologically revealed the lesion to be pyogenic granuloma. Patient was followed up after a week, one month and one year, and no recurrence of the lesion was seen.

Suggestive Reading ::

This is the much anticipated fourth novel of Chetan Bhagat. Set up in the backdrop of Varanasi, this is the story of three friends; Gopal, Rhagav and Aarti and their struggle to find love, fame and fight corruption. The novel is based upon the rampant corruption apparent in the Indian youth educational system. As one protagonist gives in to the system, the other fights with it. The story is about their respective fights. Using the oldest city of the world the author sets up the contrast of modern thinking and aspirations of today's system. The author swiftly builds up the rapport with the Indian youth, taking them in the centre. How does the educational system work in the nation and how does the common people and youngsters are involved and taken up by the corruption and become a part of it, is very well portrayed by the author.
