The current dental education is discipline based and is time bound. This system emphasizes on what is expected to learn rather than what is expected to do. It gives more weightage to final summative assessment than formative assessment. This has resulted in malalignment of curriculum and need of society/student. Competency based dental education can remediate as it is derived from the need of local, national and global community. This program will provide you an insight into CBDE What, Why and How?

WEBINAR

on

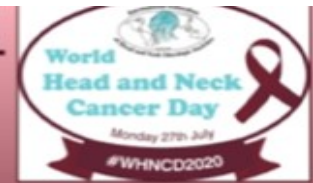

“Oral Cancer Prevention & the role of Dentists”

organized by the

**Department of
Continuing Dental Education**

In collaboration with the

Department of Oral Medicine & Radiology

External Resource Person:

Dr. Suzanne Tanya Nethan

B.D.S, M.D.S (Oral Medicine & Radiology)

Consultant (Medical) & Program Manager,

Project ECHO, ICMR-NICPR, Noida

Oral cancer is the 17th most common cancer globally and the 2nd most common cancer in India (most common cancer among males) with a low 5-year survival rate, which is mainly owing to patients reporting at an advanced stage. Hence, early detection through screening for potentially malignant lesions is imperative. Dentists are the most appropriate healthcare providers for this task given their forte of work involving the oral cavity. Also, cessation of tobacco use, the primary yet preventable risk factor for oral cancer, is essential. This session will discuss the primary & secondary prevention of oral cancer and the role of dentists in the same.

Director, Aastha Oncology Associates,

President, Foundation for Head & Neck

Oncology (FHNO), Founder Secretary,

Gujarat Society of Head & Neck Oncology,

(GSHNO) Ahmedabad, INDIA

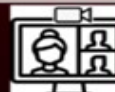

South East Asia (India being the largest population in this group) has more than 70% of global oral cancer load. India has more than one third of total global oral cancer load. Majority of these are detected in stage III and IV. According to WHO's latest assessment, cancer cases in India will multiply five times over the next decade. Any country, who needs to take care of these massive numbers of patients, will not only require optimum infrastructures & adequate number of qualified doctors to deal with the load but also uniformly effective protocols. Let us understand where we are & what we can do about it.

July 27: World Head & Neck Cancer Day-The Department of Oral Medicine and Radiology celebrated World Head and Neck Cancer Day 2020 by initiating a tradition of elevating each other, under the title of "Elevating People is Our Tradition" specifically with our Alumni. The department conducted a webinar for the BDS final year students. Dr. Suzanne Tanya Nethan, Consultant (Medical) & Program Manager, Project ECHO, Clinical Oncology, ICMR-National Institute of Cancer Prevention & Research was the External Resource person, who also happens to be our Alumni from our very first postgraduate batch (2012-13). The topic of the webinar was "Oral Cancer Prevention and the Role of Dentist".

July 28: World Hepatitis Day-Saraswati Hospital & Research Centre has celebrated this day by conducting the free Camp of Hepatitis B in the Hospital for the students of Saraswati Dental College & Birendra school of Nursing and for the walk-in patients. Dr. Anupama Verma has given the free Consultation on Hepatitis B, she told that there are five main strains of the hepatitis virus – A, B, C, D and E. This day by conducting the free Camp of Hepatitis B in the Hospital for the students of Saraswati Dental College & Birendra school of Nursing and for the walk-in patients. Dr. Anupama Verma has given the free Consultation on Hepatitis B, she told that there are five main strains of the hepatitis virus – A, B, C, D and E.

on

"Slice, Section and Show – CBCT holds the future"

Organized by

Department of Continuing Dental Education

In collaboration with

Department of Oral Medicine & Radiology

External Resource Person:

Dr. M.K. SUNIL
MDS, DHA, FICD, FPFA, DHA
Professor and Head, PhD Guide
Dept of Oral Medicine and Radiology
Teerthanker Mahaveer Dental College
and Research Center, Teerthanker
Mahaveer University, Moradabad.

The discovery of X - rays in 1895 by Sir W.C. Roentgen was an incredible era in the history of medicine. Diagnostic imaging in a different planes is new concept and 3D imaging evolved to meet the demands of these advanced technologies in delivering new treatment strategies. High cost and radiation exposure were the drawbacks of the utilization of CT in dentistry. The introduction of CBCT is a new revolutionary imaging technique in maxillofacial region. CBCT offers high quality images with short scanning time and low radiation dose. This lecture will highlight the various applications of CBCT in dentistry.
